Skills

Leadership Tech lead of two teams, 25 engineers
AWS Cloud Infra CDK, CloudFront, API Gateway, EC2, ECS, DynamoDB, IAM, Step Function

Backend Kubernetes, Docker, Dagger, GRPC, MongoDB
Frontend React, Redux, D3js, Webpack
Languages C + +, Python, Java, JavaScript, Ruby, Rust

Education

Cornell Tech

Master of Information System, Connective Media

Fall 2015 - Fall 2017

Peking University

Bachelor of Science, Computer Science

Fall 2011 - Fall 2015

Experience

Amazon

December 2022 - Now

SDE III / Tech Lead

Amazon Ads: Interactive Video Creative – Tech Lead

- Uber tech lead of two teams, working closely with leaderships on tech strategies and cross-organizational alignment.
- Host team logistics including operational issue review, bi-weekly sprint planning, and retrospective.
- Mentored engineers from different teams. Helped two engineers get promoted successfully in 2025.
- From 2025 July, worked as the temporary manager of one team.

Amazon Ads: AI powered smart overlay

- Drove the design and launch of an AI powered smart overlay that uses AI to optimize the position and duration of interactive overlay on video creative, maximizing user engagement while minimizing the chance it blocks critical ad content.
- Increased interactivity demand coverage by ~20 %, and received overwhelmingly positive feedback from advertisers.

Amazon Ads: Interactivity-as-a-Service

- Initiated and drove the launch of interactivity-as-a-Service, an initiative to support personalized interactivity across different ad formats on both demand and supply, bridging the unique advantages of Amazon Retail experiences with Ads experiences.
- Worked with 8 different teams across supply and demand, finalized the scope and timeline with product manager and leadership, and led a group of 6 engineers on core execution and oversaw the progress of two away-teams at the same time.
- In 2025, increased ~200 MM revenue from new demands and enhanced ~600 MM revenue from existing demands with personalized interactivity, bringing net new engagements and purchase conventions.
- Expanded personalized interactivity to multiple supply platform, including 1st party supply (Prime Video, FreeVee), as well as 3rd party supplies (Samsung, etc.). Increased interactivity driven revenue by 80 MM in 2025.

Stripe

September 2021 - December 2022

Infrastructure Engineer (Java, Scala)

- Designed and led the development of document level access control for internal database client library.
- Led the development of the end-to-end index management pipeline for stripe Mongo databases, which supports hundreds of index building request every day.
- Reduced developer friction by improving the compile time enforcement of model definition written in Protobuf.

Citadel

January 2019 - September 2021

Quantitative Developer (C + +, Python)

- Designed and led the development of the next generation internal volatility engine that calculates on **gigabytes of trade data and market data**, and updates risk metrics in real-time.
- Designed and led the development of Guideline service, a risk exposure monitor for all trading activities in real-time.
- Designed and led the development of a data pipeline that runs on daily basis to analyze transaction cost, fees, and commissions of all trades.
- Improved and maintained a fast querying framework of **multiple terabytes of historical risk metrics**.

Google

August 2017 - January 2019

Software Engineer (Java, JavaScript)

- Drafted and launched the web frontend of Google Crowdsourcing, a crowd sourcing data labeling platform, supporting image and text, and video dataset labeling.
- Built self-serving solution for potential internal clients to quickly onboard their dataset.
